Johnson & Johnson vaccine suspension — what this means for you

**By Devon County**

When the U.S. government shut down J&J’s vaccine, it did so at the direction of the Food and Drug Administration (FDA) and Department of Health and Human Services (HHS). The public health strategy is that vaccines are considered drugs or medical devices until FDA approves them. This allows the U.S. government to take action to stop distribution of unapproved products.

The CDC has said the policy is based on continuing to make three assessments:

- The investigation continues. In this case, those cases can be further investigated. At some point, there will be a determination of cause.
- J&J does not have a vaccine approved by either the FDA or HHS. It will remain unapproved until the FDA makes an official declaration.
- J&J is not currently being investigated for any other vaccines.

Because of this rare occurrence, the suspension has been shown to be due to the J&J vaccine. It is important to consider that the investigation has recommended a pause in the use of the J&J vaccine. This does not mean the vaccine is not safe, but it does mean that the vaccine is currently being investigated.

The CDC will convene a meeting of the Advisory Committee on Immunization Practices (ACIP), which is an independent board of health experts selected by the health and human services secretary that advises the CDC on vaccine use. The ACIP will review the available evidence and make recommendations on whether to lift the ban on J&J’s vaccine.

**What is the bottom line?**

The CDC is currently investigating cases of blood clotting with low platelets in adults who received the J&J vaccine. While researchers do not know why this is so, many health care professionals believe it is likely due to the J&J vaccine. It is important to note that this vaccine suspension is not expected to last for long, as the ACIP will meet to review the evidence and make recommendations on whether to lift the ban on J&J’s vaccine. As of now, the vaccine cannot be administered to any individuals, and people who are scheduled to receive the J&J vaccine should be aware of the current investigation.

**So what do we do now?**

For now, people who have received the J&J vaccine should continue to monitor their health for any signs of a blood clot. If you have received the J&J vaccine and experience any of the following symptoms, you should seek medical attention immediately:

- Chest pain or pressure
- Shortness of breath
- Changes in vision
- Nausea
- Abdominal pain
